BIODATA

I'm a Ghanaian game developer, narrative designer, and creative who loves building games that tell meaningful stories. I recently completed my National Service at LetiArts — one of Africa's leading game studios — where I shipped multiple titles, led a full game project as Technical Lead, and taught game development to children. I continue to grow as a Unity Developer at Organised Khaos, a role I have held concurrently since February 2024.

What sets me apart is that I genuinely love every side of the process: the craft of writing (characters, worlds, dialogue), the logic of systems design, and the visual language of art and illustration. For me, code is just another creative tool — most alive when storytelling, design, and technology collide.

TECHNICAL/ SOFTWARE SKILLS

Game Engines	Unity (C#)
Programming Languages	C#, C++, C , Java
Graphics & Tools	Shader programming, Digital Art
Version Control	Git, Github Desktop
Creative	Narrative Design, Fictional writing
Development Practices	Agile/Scrum, CI/CD(Jenkins) , TDD, SOLID

EXPERIENCE

Unity Developer, Organised Khaos - Remote, Ghana

February 2024– Present

- Co-developing NitroQuiz, a competitive quiz-racing game that uses mental challenges across multiple subjects to drive player engagement..

National Service Personnel (Game Developer), LetiArts - Accra, Ghana

October 2024– October 2025

- Served as Technical Lead on Dial of Truth, a cozy investigative desktop game built in Unity with C#, overseeing game design, core programming, system architecture, narrative writing, documentation, and coordination of a cross-functional team of artists, designers, and writers.
- Built a flexible flag-based system enabling multiple in-game activities to influence branching narratives, and expanded a custom dialogue system to support quests, tasks, and dynamic conversation types.
- Created Relax Mode for LetiArts' mobile game Sweave — a low-pressure gameplay variant designed in Unity/C# to ease players into core mechanics through calm visuals, simplified gameplay, and soft audio, improving accessibility and player onboarding.
- Developed multiple web games for LetiArts — including HideAway (GDevelop), TapTap Mask (GDevelop), and FlipTheBottle (Cocos Studio) — across diverse engines and publishing pipelines, deploying to platforms including MTN's Ayoba app and itch.io.
- Served as Narrative Designer on a confidential IP, contributing to character creation, plot structure, scriptwriting, and novel development.
- Contributed to Africa's Legends: Dawn — a comic/game project reimagining African heroes for a new

- generation — supporting documentation, plot development, worldbuilding, character design, and comic script and novel adaptation writing.
- Taught game development to children as a tutor across the LetiArts × IIPGH programme, Springboards' Teampreneurship Program, and the company's own Steam Academy initiative.
- Participated extensively in game presentations and pitching sessions, showcasing projects to diverse audiences and stakeholders, and provided feedback with a particular focus on narrative design and storytelling.

Freelance Software Developer, Defopage - Remote, United Kingdom

Jan 2023 – March 2024

- Worked as a front end developer on the SizeMug, a productivity web app using React, React Native and Node JS.
- Designed and modified existing software to improve usability and visual appeal.

Intern, iCODE - Takoradi, Ghana

May 2022 – July 2022

- Organised conference rooms, and catering and sent invitations to help coordinate events
- Performed clerical tasks to provide assistance to executives.
- Participated as a teaching aid training and seminars to enhance skills and promote growth in programs in the rural areas of Western Region, Ghana

KEY PROJECTS

NitroQuiz, Organised Khaos

February 2024– Present

- Developed a quiz racing game that utilizes competitiveness to urge players to win using mental quizzes of different subjects

Sweave (Unity), LetiArts

November 2024– February 2024

- Developed “Relax Mode,” a low-pressure variant of the game that introduced players to core mechanics through simplified gameplay, soft visuals, and calming audio, improving accessibility and player onboarding.
- Pitching the game and its developments at events to players and investors.
- Speaking at marketing events to gather feedback.

HideAway (GDevelop), LetiArts

February 2024– March 2024

- Designed and developed a simple yet engaging mobile web game with 23,000+ play sessions, built in GDevelop and deployed on MTN's (Largest Ghana Telecommunications Network) Ayoba app.
- Responsible for game design, mechanics, and implementation, ensuring smooth gameplay and replayability.
- Gained hands-on experience in rapid prototyping, player engagement, and publishing web games.

FlipTheBottle (Coco's Studio), LetiArts

April 2024– May 2024

- Designed and developed FlipTheBottle, a casual mobile web game developed in Coco's Studio.
- Deployed game on itch.io.

TapTapMask (GDevelop), LetiArts

March 2024– April 2024

- Design and developed TapTapMask, an interactive mobile web game built with GDevelop that challenges players' memory retention and reflexes, and deployed it on GDevelop's platform for public play.

EDUCATION

- University of Mines and Technology 2021- 2024
Programme: B.Sc Computer Science and Engineering January
Relevant Modules: Procedural Programming in C++, Object Oriented Programming in C++, Java, Web Programming, Public Relations, Data Structures

PERSONAL PROJECTS (PP) \ IN PROGRESS (IP) / UPCOMING PROJECTS (UP)

HideAway 2(Unity/C#), Personal

April 2024– Present

This is a personal project seeking to revamp the mobile hideaway game and make it both desktop and mobile, giving it a better design, story telling and making it more fun to play.

- Building a flexible hiding system using a state machine, inspired by the *HideAway* web game, enabling smooth hiding and stealth mechanics in a 2.5D world.
- Developing a basic dialogue system to support branching storytelling and character interactions.
- Designing and implementing AI enemies powered by state machines, allowing seamless transitions between idle, patrol, and combat states.
- Working on asset design and integration, ensuring consistency between visuals, mechanics, and narrative.
